Leírás

Physics has long proven that reality is far from what we perceive it to be. But what is it that we see and what is it that truly exists?

This book invites you on a thought-provoking journey, gradually revealing how human perception distorts reality, and how the world we experience is not the same as the one that truly exists. It explores the true nature and peculiarities of physical laws, then ventures further into deeper dimensions, introducing a realm where reality is no longer founded on matter, but on mathematics. All of this unfolds without equations or complex formulas – only through the free flight of thought.

Since the structure of the world displays fractal-like patterns almost everywhere, the wonders of numenism and fractal geometry illuminate paths to deeper interpretations that transcend materialist physics. By reinterpreting belief systems, we may even rewrite everything we think we know about the world – bold as that may seem at first.

This book is for those who are not content with the surface. For those who seek not only to know, but to understand. For the curious minds who wonder why we perceive the world the way we do – and what might lie beyond that perception. It speaks to science enthusiasts, philosophically minded thinkers, and all who seek the deeper faces of reality.

Table of contents

Foreword	5
1. Introduction	7
1.1. Let's change our perspective	7
1.2. Philosophical and scientific background	9
1.2.1. Platonism – the world of existing ideas	9
1.2.2. Max Tegmark and the Mathematical Universe Hypothesis	10
1.2.3. Digital physics – reality as computation	11
1.2.4. Quantum physics as the wild child of reality	12
1.2.5. Fractal geometry as God's fingerprint	13
1.2.6. Self-interpreting structures	13
1.2.7. The independence of numenism	14
2. The nature of reality	15
2.1. Is the world changing, or do we misunderstand it?	15
2.2. Scientific disciplines, layers of knowledge and distortions	17
2.3. Dimensions	18
2.4. Physical properties – The paradox of measurement	21
2.4.1. Distances – Perception of magnitude	22
2.5. Matter – the illusion of compactness	27
2.6. Time – The dimension of processes	30
2.6.1. But what was there before the Big Bang?	38
2.7. Space – Does it exist on its own?	40
2.8. Mass and weight – The reality behind	42
2.9. States of matter – Forms of behaviour of matter	43
2.10. Light and other radiation – Visible and invisible reality	47
2.11. Force fields and gravity – But how?	52
2.12. Temperature as a sensory illusion	58
2.13. The quantum world, where interpretable reality ceases to exist	59
3. The world as a mathematical structure	64
3.1. The strange world of numbers	65
3.2. Fractals, chaotic systems, self-organisation	66
3.3. Order emerging at the edge of infinity – a structure that repeats itself	67
3.4. The world of fractals – when simple rules give rise to infinite patterns	68
3.5. When order emerges from chaos	69
3.6. Self-repetition in reality: when the world rhymes with itself over and over again	75
3.7. Matter, space and time as illusions	77
3.8. Time as drifting in patterns	78
4. The mathematics of consciousness	80
4.1. Consciousness and reality	84
4.2. After death...	86
4.3. Gödel's incompleteness theorem and the paradox of self-awareness	87
4.4. Consciousness and the soul as an internal perspective	88
4.5. The illusion of free will	90
4.6. Subjective perception of time in fractal structures	93
4.7. The formula cannot be calculated – we are in it	95
4.8. Reality as a self-speaking structure	95
4.9. Numenism as mental liberation	98
5. Scientific parallels and cosmological consequences	100
5.1. Mathematical descriptions of quantum physics	100
5.2. Fractal geometry as scientific proof	101
5.3. Fractal-like structures in the world	102
5.4. Patterns in physical laws	104
5.5. Spontaneous remission	104
5.6. The universe as a fractal pattern	105
5.7. Black holes, event horizons and asymptotes	106
5.8. Multiverse and self-similarity	107
5.9. Digital physics, information theory	108
5.10. The nature of waves and the internal examination	109
5.11. The relationship between simulation theory and numenism	110
5.12. Quantum thinking and the world formula	111
6. Impulses in the philosophy of religion	112
6.1. Problems with religions. Contradictions, paradoxes.	113
6.2. A new direction in interpretation	117

- 6.3. Faith as a patterned relationship 119
- 6.4. Morality, free will, and the illusion of the self 122
- 7. Critical Reflections 126
 - 7.1. Possible Objections and Responses 126
 - 7.2. Limitations 128
 - 7.3. Practical implications of the model 130
 - 7.4. Limits and open questions 132
- 8. And things come together 134
